

# The mkessler-todo package

Maximilian Keßler

October 19, 2023

## Abstract

A simple wrapper around the `todonotes` package with some shortcut todos that the author uses often.

## 1 Usage

We load the `todonotes` package and the `marginnote` package.

By redefining `\marginpar` to `\marginnote` we ensure that the `\todo` macro will also be usable inside minipages properly.

**Add reference.** `\todorefer` Marks a missing reference. Does *not* require additional arguments.

**Is this useful?** `\todoquestion` Used for questions that arise during lectures. Same syntax as `\todo`.

**Fix spacing** `\todotex` Used for marking tex-related todos. Same syntax as `\todo`.

**Typo corrected, double check this.** `\todotypo` Used for marking (possible) typos of the lecturer for later inspection. Same syntax as `\todo`. Was this misspelled?
